COMMENTS				
Good work overall, I want to point out that the server didn't run from the first attempt because of capital case include of a file which might not fail on Windows Operating system, but on a MacOs or Linux you should be careful whith the upper/lowecase while you mention the included file path .... anyway, the models weren't necessarily needed so I will only point out that some of them aren't correct, the company for example needs to have a single field called investor which is of type investor, you have added all the fields of an investor inside the company again, so this should be fixed for upcoming sprints, again that wasn't asked in the sprint 1 so this won't affect your grade for sprint 1 of course, I also need to mention that some corner cases weren't handled like updaing the company types from spc to ssc, in some cases when the company gets updated, it needs to automatically change from approved to pending, any update to the company info must be reviewed first and approved
